

# Miratel® Innova

IP Nurse Call System

HOSPITALS

CARE FACILITIES

# SECURE LIFE WITH TECHNOLOGY

Miratel Innova is a flexible and reliable solution for all kinds of nurse call needs. It provides an easy-to-use interface for everyday nursing activities between patients and nurses. The software together with intelligent, self-monitoring Miratel Innova devices creates a secure and powerful communication environment for hospitals and care facilities.

## COMMUNICATION

Advanced Miratel Innova wired and wireless devices with positioning features build up reliable nurse call systems. Speech connection between patients and nursing staff, patient telephones, announcements, as well as wireless nurse call, wanderer control and assault alarms strengthen the advantages of Miratel Innova. The system brings financial savings and increases efficiency of nursing activities and the quality of patient care. The software shows the floor plan of one or several wards and displays nurse calls and alarms directed to specific teams.

## MANAGE AND REPORT

Miratel Innova can be used to generate reports of everyday nursing activities, patient's calls, operations and response times. This allows quick analysis of situations, performance of the medical staff and conclusions. Reports are based on automatically generated activity logs. Logs provide secure and traceable method to fulfill the need of operational reports.

Versatile patient information reports are used to make the everyday work of the nurses easier and the shift changes more flexible. The call history log files provide a proof in case the quality of care is questioned.

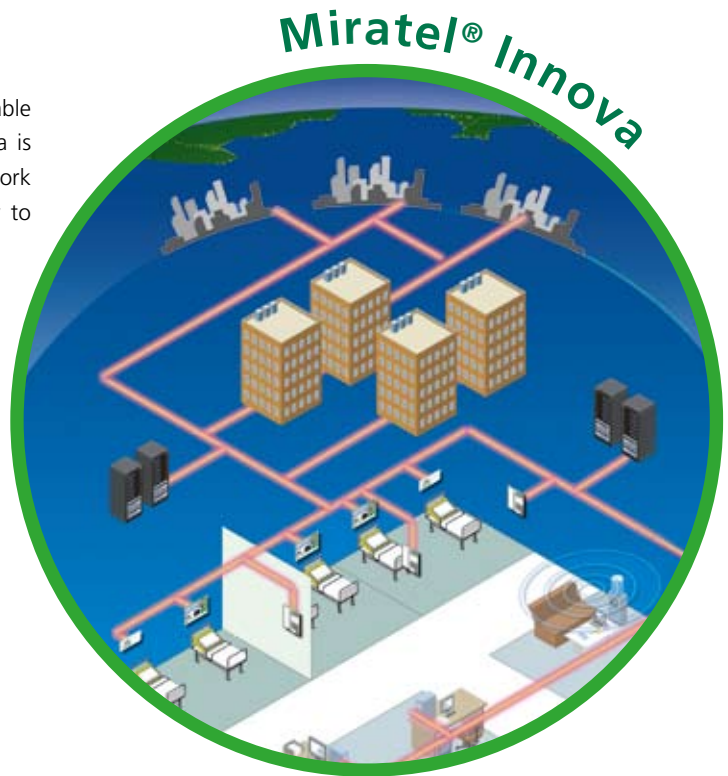

## Miratel® Innova IP Nurse Call System

Research shows that by using a nurse call system with speech, 20% of calls could be handled through the speech connection, without the nurse actually visiting the bed side. 40% of calls could be rescheduled to a more suitable time and in calls requiring immediate actions, the nurses could better prepare to the task at hand.

## IP TECHNOLOGY FOR GREATER FLEXIBILITY

The communication, alarm and security systems must be able to adapt to changes in customer needs. As Miratel Innova is based on standard IP technology and uses the standard network infrastructure, updates and expansions are extremely easy to perform.

The system can cover one ward, a hospital building, or interconnect several wards, buildings and hospitals. Remote system management based on industry standard software creates unique possibilities to securely manage and maintain each customer's system.

## BENEFITS OFFERED BY MIRATEL INNOVA

- Easy to design, install and expand
- Standard network cabling and power to devices with the same cable is used
- Each patient bed has a unique IP address
- Increased efficiency of nursing activities
- Wireless nurse call and staff security system with positioning
- Flexible and reliable in operation
- Self-monitoring system with automatic alarms
- Remote system management and maintenance
- Open interfaces enable easy integrations to other systems
- Represents an investment for the future

# MIRATEL – IN THE FOREFRONT OF IP NURSE CALL SYSTEM

**MIRATEL Oy** is a high-tech supplier of comprehensive nurse call, communication and personal security systems for hospitals, health centres, nursing homes and elderly care homes.

The company is focused on providing customized nurse call solutions which are deliverable on time, to budget and always meet requirements.

## **CERTIFIED SECURITY**

Miratel has over 40 years of experience in designing nurse call and personal security systems. Miratel Innova, IP-based nurse call system, represents the sixth generation of our systems.

In Finland, in the home country of Miratel over 85 % of hospitals and hundreds of nursing homes use our nurse call systems, which makes us the market leader.

The management system of Miratel has been certified as meeting the requirements of quality standard ISO 9001:2000 and the environment standard ISO 14001:2004. The company is a Microsoft Certified Partner.
